

Scouter and Lumen

An overview for film educators

Scouter is a director's viewfinder for iPhone and iPad. This overview is offered for your independent assessment. Whether and how it might be relevant to your work or teaching is entirely your choice.

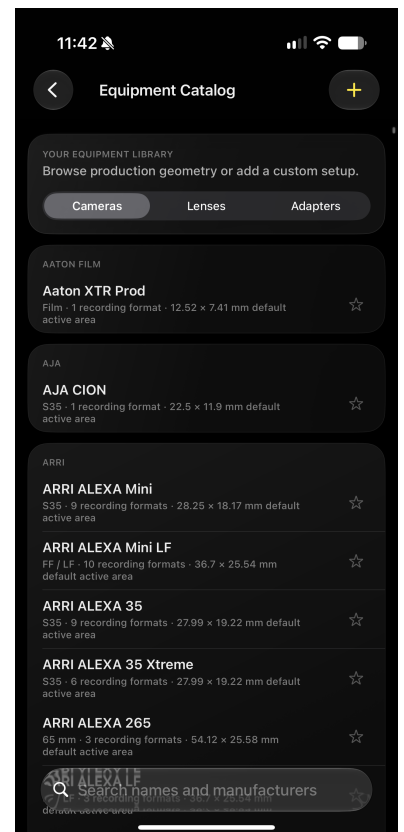

Framing and saved photos

Core framing and photo capture are free, with no subscription required. Camera and recording-format options support lens-framing comparisons. Saved photos keep choices available for later reference. The phone preview is a framing reference; optical character depends on the production camera and physical lens.

Optional Lumen lighting references

Lumen uses a selected saved scouting photo and time-of-day or weather choices to generate an AI lighting reference. The original and generated image can support discussion before a shoot. The generated image is a creative reference, not a prediction of actual lighting conditions.

Scouter Full unlocks professional non-Lumen tools and includes no Lumen credits.

App capture: Equipment Catalog

Lumen access

Eligible users receive 20 promotional Lumen welcome credits plus 3 starter credits, 23 total, once after their first verified Sign in with Apple. No purchase is required. This one-time allowance does not renew or reset. Additional credits are purchased separately.
