

Plan the shot. Explore the light.

Scouter is a director's viewfinder for iPhone and iPad with Lumen AI lighting references. Compare lens framing on location, save a scout shot, and explore how it could feel in different light.

Explore the light with Lumen

Open a saved scout shot, choose a time of day or weather, and generate an AI lighting reference. Compare it with the original to discuss the mood and visual direction before production.

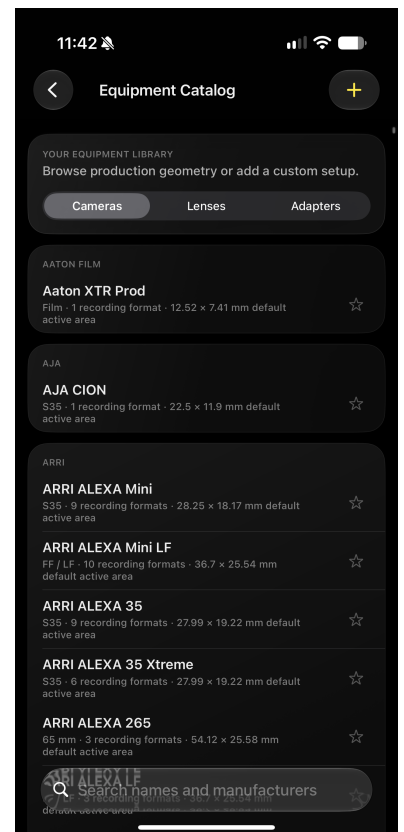

Lumen is optional. Generations use credits.

Core viewfinder and capture are free.
No subscription required.

Keep the camera plan close

Choose a camera and recording format, compare lens framing, and save the options you want to revisit.

Scouter Full unlocks professional non-Lumen tools and includes no Lumen credits. Lumen is separate from free core framing.

App capture: Equipment Catalog

Lumen access

Eligible users receive 20 promotional Lumen welcome credits plus 3 starter credits, 23 total, once after their first verified Sign in with Apple. No purchase is required. This one-time allowance does not renew or reset. Additional credits are purchased separately.
